

Treatment and Clinical Trials

Over the past 20 years, great progress has been made in the early detection and treatment of breast cancer. As a result, the number of breast cancer survivors continues to rise. In fact, there are almost three million breast cancer survivors in the United States today (more than any other group of cancer survivors).

Our [interactive treatment navigation tool](#) for newly diagnosed patients can help you explore the different [types of treatments](#) you may have.

If you have breast cancer, we encourage you to join a clinical trial. Clinical trials offer the chance to try new treatments and possibly benefit from them. Learning a new therapy is better than the standard treatment can also help others. And, as new therapies are developed, they can open doors to other drugs and procedures that may be even more effective.
